

# Exceptions and Interrupts

Lecture 3

# Exceptions and Interrupts

used by RP2040

- Exceptions
- Interrupts
- Boot

# Exceptions

for the ARM Cortex-M0+ processor

# Bibliography

for this section

**Joseph Yiu**, *The Definitive Guide to ARM® Cortex®-M0 and Cortex-M0+ Processors, 2nd Edition*

- Chapter 4 - *Architecture*
  - Section 4.4 - *Stack Memory Operations*
  - Section 4.5 - *Exceptions and Interrupts*
- Chapter 8 - *Exceptions and Interrupts*
  - Section 8.1 - *What are Exceptions and Interrupts*
  - Section 8.2 - *Exception types on Cortex-M0 and Cortex-M0+*

# Processor Exceptions

what happens if something does not work as required

# ARM Cortex-M0+ Exceptions

what happens if something does not work as required

# Exception (HardFault) Handling

ARM Cortex-M0+ has one **actual exception**, *HardFault*

- the exception table of RP2040 at address 0x1000\_0100 (start of the boot area + 4 bytes)
- the processor generates a *Reset* exception when it starts

# Interrupts

for ARM Cortex-M0+

# Bibliography

# ARM Cortex-M0+ Interrupts

some hardware device notifies the MCU

# Interrupt Handling

ARM Cortex-M0+

*IRQ*      Interrupt Request

*ISR*      Interrupt Service Routine

- the interrupt vector (table) of RP2040 starts at address 0x1000\_0040 (after the exceptions table with 15 interrupts)
- ARM Cortex-M0+ has a maximum of 32 interrupt requests (IRQs)

# Exceptions are Software Interrupt Requests

with a negative IRQ number and a higher priority

- Reset (-14)
- HardFault (-13)
- SVC (-5)
- PendSV (-2)
- SysTick (-1)

IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source
0	TIMER_IRQ_0	6	XIP_IRQ	12	DMA_IRQ_1	18	SPI0_IRQ	24	I2C1_IRQ
1	TIMER_IRQ_1	7	PIO0_IRQ_0	13	IO_IRQ_BANK0	19	SPI1_IRQ	25	RTC_IRQ
2	TIMER_IRQ_2	8	PIO0_IRQ_1	14	IO_IRQ_QSPI	20	UART0_IRQ		
3	TIMER_IRQ_3	9	PIO1_IRQ_0	15	SIO_IRQ_PROC0	21	UART1_IRQ		
4	PWM_IRQ_WRAP	10	PIO1_IRQ_1	16	SIO_IRQ_PROC1	22	ADC_IRQ_FIFO		
5	USBCTRL_IRQ	11	DMA_IRQ_0	17	CLOCKS_IRQ	23	I2C0_IRQ		

# Boot

of the RP2040

# Bibliography

for this section

## **Raspberry Pi Ltd, *RP2040 Datasheet***

- Chapter 2 - *System Description*
  - Section 2.7 - *Boot sequence*
  - Section 2.8 - *Bootrom*
    - Subsection 2.8.1 - *Processor Controlled Boot Sequence*

# Boot

how the ARM Cortex-M0+ starts

- the *start\_address* for RP2040 is 0x1000\_0100
- RP2040 has another boot loader that it loads from 0x1000\_0000

# Boot

## The RP2040 boot process

\* drawing is not at scale, code and data are significantly greater than the interrupt vector

The internal boot loader cannot be overwritten and assures that bricking the device is difficult.

# Set Fault Handler

bare metal, pac or embassy-rs

```
// defined by the cortex-m-rt crate
pub struct ExceptionFrame {
    r0: u32,
    r1: u32,
    r2: u32,
    r3: u32,
    r12: u32,
    lr: u32,
    pc: u32,
    xpsr: u32,
}
```

**HardFault** never returns

```
1  #[exception]
2  unsafe fn HardFault(_frame: &ExceptionFrame) -> ! {
3      panic!("HardFault {:?}", frame);
4  }
```

# Set SysTick Handler

bare metal, PAC or embassy-rs

```
1  #[exception]
2  unsafe fn SysTick() {
3      // execute at a fixed interval
4  }
```

# Set Interrupt Handlers

bare metal, PAC

*embassy-rs already defined the interrupts as it needs them*

IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source
0	TIMER_IRQ_0	6	XIP_IRQ	12	DMA_IRQ_1	18	SPI0_IRQ	24	I2C1_IRQ
1	TIMER_IRQ_1	7	PIO0_IRQ_0	13	IO_IRQ_BANK0	19	SPI1_IRQ	25	RTC_IRQ
2	TIMER_IRQ_2	8	PIO0_IRQ_1	14	IO_IRQ_QSPI	20	UART0_IRQ		
3	TIMER_IRQ_3	9	PIO1_IRQ_0	15	SIO_IRQ_PROC0	21	UART1_IRQ		
4	PWM_IRQ_WRAP	10	PIO1_IRQ_1	16	SIO_IRQ_PROC1	22	ADC_IRQ_FIFO		
5	USBCTRL_IRQ	11	DMA_IRQ_0	17	CLOCKS_IRQ	23	I2C0_IRQ		

```
1  #[interrupt]
2  unsafe fn IO_IRQ_BANK0 {
3      // so some work when a pin interrupt triggers
4  }
```

# Use interrupts in embassy-rs

embassy-rs registers interrupt handlers and exposes a high level API

IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source	IRQ	Interrupt Source
0	TIMER_IRQ_0	6	XIP_IRQ	12	DMA_IRQ_1	18	SPI0_IRQ	24	I2C1_IRQ
1	TIMER_IRQ_1	7	PI0B_IRQ_0	13	IO_IRQ_BANK0	19	SPI1_IRQ	25	RTC_IRQ
2	TIMER_IRQ_2	8	PI0B_IRQ_1	14	IO_IRQ_QSPI	20	UART0_IRQ		
3	TIMER_IRQ_3	9	PI01_IRQ_0	15	SIO_IRQ_PROC0	21	UART1_IRQ		
4	PWM_IRQ_WRAP	10	PI01_IRQ_1	16	SIO_IRQ_PROC1	22	ADC_IRQ_FIFO		
5	USBCTRL_IRQ	11	DMA_IRQ_0	17	CLOCKS_IRQ	23	I2C0_IRQ		

```
1  #[embassy_executor::main]
2  async fn main(_spawner: Spawner) {
3      let p = embassy_rp::init(Default::default());
4      let mut button = Input::new(p.PIN_20, Pull::None);
5
6      loop {
7          info!("Waiting for the button press");
8
9          // waits for interrupt (sent by button)
10         // IO_IRQ_BANK0
11         button.wait_for_high().await;
12
13         info!("Button was pressed");
14     }
15 }
```

# Conclusion

we discussed about

- Exceptions
- Interrupts
- How the RP2040 boots and loads the software
